

Ashiru Akeem Temitope

Senior WordPress Developer | Full Stack Developer (PHP • React • Node.js)
Lagos, Nigeria | +234 913 669 7904 | ashirutemitope58@gmail.com | github.com/Kimmy900632

PROFESSIONAL SUMMARY

WordPress developer with 7+ years building and maintaining client websites, most recently a portfolio of 75+ live sites across AWS, Hostinger, Bluehost, and GoDaddy. Experienced across the full delivery cycle: custom layouts in Elementor, WooCommerce stores, security hardening at scale, and same-day resolution of production incidents. Comfortable moving beyond page builders into PHP, JavaScript, and REST API work, with full-stack experience in React.js, Node.js, and TypeScript.

TECHNICAL SKILLS

WordPress: Elementor, ElementsKit, WooCommerce, Advanced Custom Fields, child themes, custom post types, plugin configuration, WP Mail SMTP, migrations, staging-to-live deployment

Frontend: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Tailwind CSS, responsive and cross-browser development

Backend & Data: PHP, Node.js, REST API integration, MySQL, Redis

Hosting & Ops: AWS, Hostinger, Bluehost, GoDaddy, cPanel, DNS and SSL, backups and disaster recovery, security hardening

Tools: Git & GitHub, Figma, Google Analytics, SEO, Jira, Trello

PROFESSIONAL EXPERIENCE

Freelance WordPress Developer | Independent | Remote | 2026 – Present

- Build and maintain client WordPress websites end to end using Elementor and ElementsKit — custom page layouts, blog and archive templates, and contact form and SMTP configuration.
- Handle hosting setup, domain and DNS configuration, migrations, and staging-to-live deployment across shared and cloud environments.
- Optimise site speed, mobile responsiveness, and on-page SEO, and provide ongoing maintenance and security patching for client sites.

Full Stack Developer | Media Links | Doha, Qatar (Remote) | 2023 – 2026

- Managed the full lifecycle of 75+ live WordPress websites across AWS, Hostinger, Bluehost, and GoDaddy — provisioning, DNS and SSL setup, security hardening, automated backups, and disaster recovery.
- Built and customised client sites using Elementor and ElementsKit, including custom layouts, blog and archive templates, contact form and SMTP configuration, and WooCommerce store setup.
- Ran weekly patch cycles across the full portfolio for WordPress core, themes, and plugins, maintaining zero site compromises over three years of continuous management.
- Diagnosed and resolved critical production issues under client deadlines, consistently restoring service the same business day.
- Re-engineered media handling and caching across 50+ sites, cutting average page load times by roughly 30% as measured in PageSpeed Insights.
- Tracked traffic and user behaviour in Google Analytics and translated the data into concrete layout, content, and performance changes for clients.

WordPress Developer (Freelance / Contract) | Fulcrum Business Operations | Remote | 2018 – 2023

- Maintained a portfolio of client WordPress websites on contract alongside full-time study — updates, monitoring, automated backups, and security patching.
- Debugged and refactored legacy theme and plugin code, extending the working lifespan of ageing WordPress installations.

SELECTED PROJECTS & BUILDS

Couchly — practice1.ucareride.com — Demo build. Full WooCommerce furniture store: product catalogue with sale pricing, cart and checkout, customer accounts, wishlist, and blog. Elementor.

TruthChain — Fake-news verification agent on GenLayer. Intelligent contract with non-deterministic web retrieval and LLM evaluation; genlayer-js frontend.

PulseOps — Slack-native website and server health monitoring agent built on MCP. Node.js, TypeScript.

Guess the Vibe — Daily puzzle game for Reddit built with Devvit. TypeScript, React, Redis, Hono.
